SUMMARY

Senior software engineer and technical lead with 20+ years across embedded systems, cellular/mobile security, and vulnerability research. Leads 5–6 person research teams end-to-end: technical direction, sprint planning, direct technical contributions, and customer-facing delivery. Deep hands-on background in full-stack development (Python, Postgres, JavaScript/TypeScript), reverse engineering (ARM, C/C++, CAN bus).

EMPLOYMENT HISTORY

Nightwing

2019 - Present **Technical Lead** — Led 5–6 person research teams across multi-year programs. Owned technical direction, sprint planning, and direct technical contributions; delivered regular status to the customer; provided performance feedback for all team members and owned team composition.

- **2019 – 2021 — Firmware CVE tracking.** Lead developer for a web crawler that collected firmware images across ~12 vendors, building a ~2 TB corpus used to track CVEs across generations of firmware. (Python, Postgres)
- **2021 – 2024 — Industrial robotics vulnerability research.** Led a team reverse-engineering compiled C/C++ + industrial robot systems, including live instrumentation of running systems via the CAN bus.
- **2024 – Present — Physical access-control vulnerability research.** Leading reverse engineering and vulnerability research of building security systems — HID readers, NVRs, and IP cameras. (Python)

Independent Contractor

2016 - 2019 * **Raytheon Intelligence Information Services** — Developed a software build system and mirroring infrastructure for an air-gapped network. * **Facilities Survey** — Lead developer for the CMS View and Space Manager hospital facilities management product suite (JavaScript, TypeScript, Python backend on Microsoft Azure). Multiyear effort spanning multiple disciplines. * <https://www.fsiservices.com/cms-view> * <https://www.fsiservices.com/cms-space-manager> * **LandEconics** — Developed a cost projection estimation system for landscape architects.

Endgame

2011 - 2016 **Director, Mobile Access**

- Led a three-engineer team developing repeatable, isolated, over-the-air black-box test procedures for an unsupported third-party smartphone app, identifying and characterizing bugs across multiple software versions.
- Led a three-person, six-month sub-API-level study of smartphone sandbox limitations across iOS, Android 4.2, Symbian, WP8, and BlackBerry 7.
- Internal research projects repurposing consumer electronics hardware; developed an Android wireless sniffing tool including the front-end implementation.

Stack: ARM architecture, Java, Python, RealView ARM Tools, IDA Pro. Platforms: Nokia/Symbian, Android, Windows Phone 8, BlackBerry 7. Test equipment: Anritsu, ip.access Picocell, OpenBTS. Waveforms: 802.11, GSM, WCDMA/UMTS, CDMA.

Raytheon S.I. Government Solutions

2008 - 2011

- Various embedded development projects focused on mobile phone platforms.
- Implemented a complete ARMv6 disassembler using test-driven development with a representative instruction unit test bed of 250,000 test cases.
- Worked with a small embedded team to repurpose a hardware debugging protocol into a data analysis tool, make calls into non-standard system drivers, and perform black-box testing and security auditing of third-party software.

- Led a team of 8 engineers to develop a cell-phone-agnostic security test framework. Developed customer relationships that leveraged these successes to open new business areas.

Stack: ARM architecture, C/C++, Python, RealView ARM Tools, IDA Pro. Platforms: Apple, Nokia/Symbian, Google. Test equipment: OsmocommBB, Anritsu, Rohde & Schwarz, Agilent, OpenBTS. Waveforms: 802.11, GSM, WCDMA/UMTS, CDMA.

Harris Corporation

November 2006 - September 2008

- Sole developer retrofitting the software architecture of a GSM product for the UMTS protocol, using the OSS Nokalva ASN compiler to generate libraries for parsing UMTS Layer 3 messages. Provided on-site customer test support and product demonstrations domestically and abroad.
- Led a team of 2–3 developers to productize the UMTS prototype and support customer prototype testing; additionally built a parser/compiler that generated C code from ASN specification documents. First exposure to project scheduling, cost estimation, and team leadership.
- Stack: C++, MFC, Windows API, Visual Studio 6 & 2005, SQLite, Apache ANT, Xoreax IncrediBuild, InnoSetup, GOLD Parser, OSS Nokalva ASN C++ tools; ASN, CSN, UMTS, GSM, Doxygen.

April – October 2006

- Carried a design through Preliminary and Critical Design Review for a set of enhancements to a GSM product.
- Implemented the UI for a modem-based SMS product (interfaces to the engine changed several times over the course of development). Stack: C++, MFC, Windows API, Visual Studio 6.0 & 2003, ChartFX/Microsoft Chart COM components, U3-compliant USB package; Multi-tech and Sierra GSM modems (PCMCIA & USB).

EDUCATION

Auburn University — Master of Software Engineering, August 2005

Baylor University — Bachelor of Science (Computer Science), December 2002

TALKS & PUBLICATIONS

Malware Technical Exchange Meeting 2015

Exploitation of Mobile OEM Software
